

(Continued from back cover)

MOHAMMAD MASJED-JAMEI, GRADIMIR V. MILOVANOVIĆ: <i>Construction of Gaussian quadrature formulas for even weight functions</i>	177–198
RICARDO ALMEIDA: <i>What is the best fractional derivative to fit data?</i>	199–207
ADRIAN PETRUŞEL, GABRIELA PETRUŞEL, JEN-CHIH YAO: <i>Fixed point and coincidence point theorems in b-metric spaces with applications</i>	208–224
MARGARET ARCHIBALD, AUBREY BLECHER, CHARLOTTE BRENNAN, ARNOLD KNOPFMACHER, TOUFIK MANSOUR: <i>Shedding light on words</i>	225–240
ASEEM DALAL, NARENDRA K. GOVIL: <i>On comparison of annuli containing all the zeros of a polynomial</i>	241–250
BRANKO MALEŠEVIĆ: <i>EDITORIAL: AADM next phase</i>	251–252

Prepress and layout: Bojan Banjac, Branko Malešević

Publishers: University of Belgrade, Faculty of Electrical Engineering
Academic Mind, Belgrade

Printed: April 2017.

CONTENTS

JOZEF KRATICA, VERA KOVAČEVIĆ-VUJČIĆ, MIRJANA ČANGALOVIĆ: <i>The strong metric dimension of some generalized Petersen graphs</i>	1–10
HONGLIANG LU, DAVID G.L. WANG: <i>The number of disjoint perfect matchings in semi-regular graphs</i>	11–38
MARKO KOSTIĆ: <i>Abstract degenerate fractional differential inclusions in Banach spaces</i>	39–61
R.M. MORRIS, P.G.L. LEACH: <i>The effects of symmetry-breaking functions on the Ermakov-Pinney equation</i>	62–73
PETER ROWLINSON: <i>More on graphs with just three distinct eigenvalues</i>	74–80
V. NIKIFOROV: <i>Merging the A- and Q-spectral theories</i>	81–107
MILICA ANĐELIĆ, TAMARA KOLEDIN, ZORAN STANIĆ: <i>Distance spectrum and energy of graphs with small diameter</i>	108–122
NAIR ABREU, ANDRÉ E. BRONDANI, LEONARDO DE LIMA, CARLA OLIVEIRA: <i>A note on the Nordhaus-Gaddum type inequality to the second largest eigenvalue of a graph</i>	123–135
A. CARMONA, A.M. ENCINAS, M. MITJANA: <i>Resistance distances on networks</i>	136–147
BOJANA MIHAILOVIĆ, MARIJA RAŠAJSKI: <i>Some graph mappings that preserve the sign of $\lambda_2 - r$</i>	148–165
HELMUT MAIER, MICHAEL TH. RASSIAS: <i>The maximum of cotangent sums related to Estermann's zeta function in rational numbers in short intervals</i>	166–176
